Want to add some personality to your device? Creating a wallpaper can be a fun and creative way to show off your style. This article will tell you how to start from square one and create a background for the device that is unique to you. Whether you consider yourself artistic or not, it's always great when you can have complete creative freedom. Canva is a free app with paid upgrades that allows you to create any size design and use their items or upload your own. This process can be a fun way to show off your personality. Before you begin - download the Canva app is a great app that allows you to create your own background from scratch, use a template or edit templates that have already been created. You can also use the templates they have and edit them any way you want, but this app is a great tool to start with an empty slate. Here's how to start creating your masterpiece on your iPhone or iPad. Open App Store Search after Canva by tapping the search icon. Or download the Canva app directly. Open the application by tapping open in the App Store. Create an account or sign in with Facebook or Google. You should now be able to see where you can create different designs using the templates or use custom dimensions. How to find the dimensions of the Apple product Canva requires you to provide the pixel ratio for your Apple product. This is information you can find on Apple's website when viewing your specific product. But here's a quick reference if you're like 99 percent of others and don't know this number from the top of your head. iPhone: iPhone SE: 1136 x 640-pixel resolution iPhone 6s/7/8:1334 x 750-pixel resolution iPhone 6s Plus/7 Plus/8 Plus: 1920 x 1080-pixel resolution iPhone X and XS: 2436 x 1125 pixels resolution iPhone XR: 1792 x 828 pixels resolution iPhone XS Max: 2688 x 1242-pixel resolution iPad: iPad mini (all models), fifth Generation and iPad air (1st generation and 2): 2048 x 1536-pixel resolution iPad (9.7 inches): 2048 x 1536 pixel resolution iPad Pro (10.5 inch) and iPad Air: 2224 x 1668-pixel resolution iPad Pro (11 inches): Resolution of 2388 x 1668 pixels iPad Pro (12.9 inches): Resolution of 2732 x 2048 pixels This gives you the perfect background for your Apple product. No more cropping or customizing your photos. Here's how to resize your canva design Once you've downloaded the app and found the size of your design, it's time to insert those dimensions and see the blank canvas. On your iPhone or iPad, it's the same process to insert this information. Select custom dimensions. Use the pixel size for your Apple product from the chart above. Invert the two numbers so that the width is the smaller number and the height is greater for a portrait wallpaper. Click Create. At this point you will see a beautiful blank canvas for your creative mind to do its magic. Creating design Here's the fun part. You can add templates, images, text, background, etc. Making a wallpaper with this app is a bit like the arts and crafts project for the tech world. iPhone: Create design. Add items by selecting the plus (+) icon in the lower-right corner. After you complete the design, click the download icon at the top of the iPad: Create design. Add items by selecting the options on the left side. After After design, click the download icon in the upper-right corner. You're almost there! When you're happy with your design and you've downloaded your creation, it'll appear in your photos. Setting the wallpaper Congratulations! You've created your design, and now is the time to set it as your background, lock screen, or both. Here's how to complete the process on iPhone or iPad. Go to Settings. Tap Background. Tap Choose a new background image Tap All photos. Select the custom design. Set it as **Lock screen, Home screen, or both. ** At this point you should have a wonderful background that you created. There are other apps out there that let you create your own design, but none of them compared to Canva. It is free, easy to use and is available on almost any platform. Do you have a question? If you have questions about how to design the perfect background for your personality or have an app you'd recommend, include it in the comments section below. We can earn a commission for purchases using our links. get more information. If you own an iPhone or iPad, you've probably noticed a 3D effect on some wallpapers, where it seems that your home screen icons hover over the top. You can actually do this with almost any image without special software. The wallpaper we're talking about is called parallax wallpaper, but on your iOS device, Apple refers to it as perspective wallpaper. Anyway, you probably think of it as 3D. Parallax wallpapers work by zooming in on a photo a little, so there is a bit of the image outside the visible area. That way, when you change perspective, it can move the background in a way that makes it look 3D. You can do this with any wallpaper, but if you do it with one that is exactly the resolution of the screen, it will not look as good as possible, since it will zoom in on the image. To achieve the best results for parallax wallpaper, you may need to manually resize or crop the images manually to the correct size. It is important to understand that each device is different, each has its own screen size and as such has specific wallpaper dimensions to achieve a true parallax effect. Below are the required image sizes for parallax wallpaper on most Apple iOS devices: iPhone For an iPhone 4s: Screen: 960 x 640 Parallax Wallpaper: 1196 x 740 For an iPhone 5, 5c & 5s, as well as iPod Touch 5th Generation: Display: 1136 x 640 Parallax Wallpaper: 1392 x 744 For an iPhone 6 and 6s: Display: 1334 x 750 Parallax Wallpaper : 1608 x 852 For an iPhone 6 Plus and 6s Plus : Display: 1920 x 1080 (steamed from 2208 x 1242) Parallax Wallpaper: 2662 x 2662 iPad For an iPad 2nd Gen & iPad mini Display: 1024 x 768 Parallax Wallpaper: 1262 x 1262 For an iPad 2nd gen & iPad mini Display: 1024 x 768 Parallax Wallpaper: 1262 x 1262 For an iPad 3rd and 4rd Generation: iPad Air: iPad mini with Retina display: 2048 x 1536 Parallax Wallpaper: 2524 x 2524 When you know your device's wallpaper needs, it's time to resize the image so that it with parallakskrave. parallakskrave. find an image you want to use for the device background. The best results come from original images larger than the final product. This is usually not a problem with today's camera's high megapixel counts. Try searching Google Photos for wallpapers, then click Search Tools > Size and select a size larger than the Parallax Wallpaper dimensions for your device listed above. Then we need to prune it. We're going to do this on a Mac using Preview, but you can do just as well on a Windows PC using Photoshop or another photo editor. Open our picture, we know that to fit it on our iPhone 6s, it must be 1608 x 852. Our original image is 3024 x 4032. We need to resize it enough to fit the image within our dimensions, which we need to crop to fit. Pruning it should then be very simple because the subject of our image fits easily within our cropped area. Finally, save the image as a new file. You don't want to overwrite the old one. The next step is to transfer it to your device, be it an iPhone or iPad. With a Mac, this is as easy as using AirDrop, or you can add it to Photos, and it will be synced via iCloud. With a Windows PC, it's best to use the Photos app on the iCloud website. To do this, first log in to your iCloud account, and then click the Photos icon. When you're in Photos, click Upload at the top. When you upload your new parallax wallpapers, they sync to your iPhone or iPad, and you can then set them as your home and/or lock screen. The last thing you want to do is set your new background as Perspective, not Still. If you did everything right, the new wallpaper should now have the cool 3D effect. As we said, you can do this with about a picture, but again, you really want to start with something bigger than the final product. If you need to increase the size of your photo, then you're probably not going to be happy with the result. Don't be afraid to play around and see which photos work best for you. Exercise does perfect and you are far more likely to get the kind of result you want if you resize the images manually. The above article may contain associated links, which help support How-To Geek. How-To Geek is where you turn when you want experts to explain technology. Since we launched in 2006, our articles have been read more than 1 billion times. Want to know more? More?
